Methyl salicylate	119-36-8	152.147	Liquid	-	AOO	NC	9	NA	2.7 (20%)	-	-	-	DSA05HMT=5517 (Schneider and Akkan 2004)	Minimal

Substance Name	CASRN	MW (g/mol)	Physical Form	LLNA	Veh ¹	EC3 ²	N ³	0.5x - 2.0x EC3	Max SI (Conc)	GPMT/BT ⁴	HMT	HPTA	Additional Human Skin Sensitization Data/Information ⁵	Peptide Reactivity ⁶
Nickel chloride	7718-54-9	129.599	Solid	-	DMSO ¹⁴	NC	2	NA	2.4 (5%)	+			DSA05HMT=28 (Kligman 1966a for nickel sulfate – but data expressed as nickel)	
Phenyl benzoate ⁹	93-99-2	198.217	Solid	+	AOO	13.6	3	6.8-27.2	11.1 (25%)	+			DSA05HRIPT=52489 (Baskettter et al. 2005b)	
4-Phenylenediamine	106-50-3	108.14	Solid	+	AOO	0.11	6	0.055-0.22	26.4 (1%)	+	+	+	DSA05HMT=16.4 (Kligman 1966a); DSA05HRIPT=6.9 (Marzulli and Maibach 1974)	
Salicylic acid	69-72-7	138.121	Solid	-	AOO	NC	1	NA	2.5 (25%)	-	-	-	DSA(NOEL) HMT=13793 (Kligman 1966b)	
Sodium lauryl sulfate	151-21-3	288.38	Solid	+	DMF	8.1	5	4.05-16.2	8.9 (10%)	-	-	-	DSA(NOEL) HMT=6897 (Kligman 1966b)	
Xylene	1330-20-7	106.17	Liquid	+	AOO	95.8 ¹⁵	1	47.9-100	3.1 (100%)	NA ¹⁶	-		DSA (NOEL)=68966 (Kligman 1966b)	

Abbreviations: AOO = acetone: olive oil (4:1); BT = Buehler Test; CASRN = Chemical Abstracts Service Registry Number; Conc. = concentration tested; DMF = *N,N*-dimethylformamide; DMSO = dimethyl sulfoxide; DSA = dose per skin area; DSA05 = dose per skin area leading to a sensitization incidence of 5%; EC3 = estimated concentration needed to produce a stimulation index of 3; GPMT = Guinea Pig Maximization Test; HMT = Human Maximization Test; HPTA = Human Patch Test Allergen; HRIPT = Human Repeat Insult Patch Test; LLNA = murine local lymph node assay; LOEL = lowest observed effect level; Max = maximum; MEK = methyl ethyl ketone; MW = molecular weight; NA = not available; NC = not calculated; NOEL = no observed effect level; RIFM = Research Institute for Fragrance Materials; SI = stimulation index; Veh = vehicle

¹ Unless noted otherwise, vehicle information obtained from Gerberick et al. 2005.

² Unless noted otherwise, where the number of LLNA studies equals one, EC3 values obtained from Gerberick et al. 2005.

³ Number of LLNA studies from which data were obtained.

⁴ Results obtained from Guinea Pig Maximization Test and/or Buehler Test.

⁵ Human Quantitative Data obtained from literature where human data was compared to LLNA. All data are expressed as DSA ($\mu\text{g}/\text{cm}^2$). DSA05HMT and DSA05HRIPT were obtained by linear interpolation from the lowest observed effect level to a dose corresponding to the estimated sensitization incidence of 5% (Schneider and Akkan 2004). DSA (NOEL) refers to the maximum no observed effect level. In absence of negative data, the lowest observed effect level was used, provided that the percentage of people sensitized was less than 8% (Baskettter et al. 2005b).

⁶ Peptide reactivity data obtained from Gerberick et al. 2007.

⁷ Presumed to be a non-sensitizer in humans based on the fact that no clinical patch test results were located, it is not included as a patch test kit allergen, and no case reports of human sensitization were located.

⁸ Baskettter and Scholes 1992; Ikarashi et al. 1992

⁹ Human data based on following studies: (1) Rees et al. 1989 (2) Zina et al. 1987.

¹⁰ Presumed to be a strong human allergen (search for human data ongoing)

¹¹ Dearman et al. 2001

¹² Baskettter and Cadby 2004

¹³ Human data based on Kwon et al. 2003

¹⁴ Betts et al. 2006

¹⁵ Baskettter and Scholes 1992

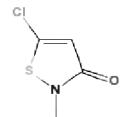

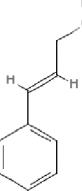

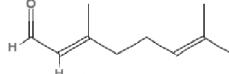

¹⁶ Estrada et al. 2003

¹⁶ Personal Communication (D. Baskettter 2008)

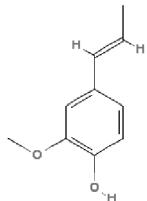

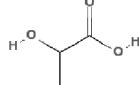

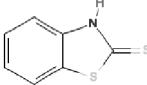

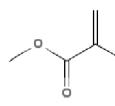

Appendix F2

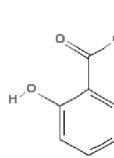

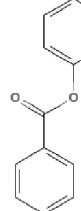

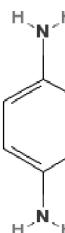

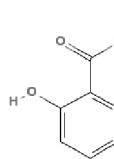

Recommended Reference Substances – Structures and Product Uses

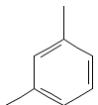

[This Page Intentionally Left Blank]

Substance Name	CASRN	Structure	Product Uses
Chlorobenzene	108-90-7		Phenol manufacture Aniline manufacture DDT manufacture Solvent for paints
5-Chloro-2-methyl-4-isothiazolin-3-one	26172-55-4		Disinfectant
Cinnamic alcohol	104-54-1		Perfume manufacture
Citral	5392-40-5		Flavor additive Perfume manufacture
Cobalt chloride	7646-79-9		Humidity and water indicator Preparation of catalysts Fertilizer and feed additive Vitamin B12 manufacture

Substance Name	CASRN	Structure	Product Uses
2,4-Dinitrochlorobenzene	97-00-7		Color photo processing Explosives manufacture
Ethylene glycol dimethacrylate	97-90-5		Polymerization agent
Eugenol	97-53-0		Fragrance and flavoring agent Insect attractant
Hexyl cinnamic aldehyde	101-86-0		Perfume manufacture
Imidazolidinyl urea	39236-46-9		Cosmetic preservative Antimicrobial

Substance Name	CASRN	Structure	Product Uses
Isoeugenol	97-54-1		Perfume manufacture Flavoring additive Topical pharmaceutical
Isopropanol	67-63-0		Topical pharmaceutical Gasoline additive Cleaning agent
Lactic Acid	50-21-5		Manufacture of lactates which are used in food products, in medicine, and as solvents
2-Mercaptobenzothiazole	149-30-4		Rubber manufacture Anticorrosive
Methyl methacrylate	80-62-6		Used in the production of polymers such as surface coating resins, plastics (Plexiglas and Lucite), ion exchange resins and plastic dentures.

Substance Name	CASRN	Structure	Product Uses
Methyl salicylate	119-36-8		Topical pharmaceutical Flavor additive
Nickel chloride	7718-54-9		Electroplating agent Battery manufacture
Phenyl benzoate	93-99-2		Production of industrial chemicals
4-Phenylenediamine	106-50-3		Hair dye Textile dye
Salicylic acid	69-72-7		Pharmaceutical Food preservative

Substance Name	CASRN	Structure	Product Uses
Sodium lauryl sulfate	151-21-3		Detergent Cosmetic
Xylene	1330-20-7		Solvent Production of industrial chemicals

Abbreviations: CASRN = Chemical Abstracts Service Registry Number

Abbreviations: AOO = acetone: olive oil (4:1); CASRN = Chemical Abstracts Service Registry Number; Conc. = concentration; DMF = *N,N*-dimethylformamide; DMSO = dimethyl sulfoxide; DNCB = 2,4-dinitrochlorobenzene; EC3 = estimated concentration needed to produce a stimulation index of 3; HCA = hexyl cinnamic aldehyde; LLNA = murine local lymph node assay; MEK = methyl ethyl ketone; NC = not calculated; ND = no data; SI = stimulation index

¹ Rationale for High Dose Key:

A: Kimber and Weisenberger 1989. Test concentrations were determined from data available in the literature and previous experience in this laboratory.

B: Baskettet et al. 1991. The choice of test concentrations was based primarily upon previous experience in guinea pig tests and the physical properties of the test material (e.g., solubility and viscosity).

C: Kimber and Baskettet 1992. Selected three consecutive concentrations from the following range: 50, 25, 10, 5, 2.5, 1, 0.5, 0.25 and 0.1% (w/v). The selection was made to provide the highest possible test concentration, while avoiding unacceptable dermal trauma or systemic toxicity.

D: Kimber et al. 1995. Test concentrations were selected on the basis of previous experience in these and in other laboratories.

E: Loveless et al. 1996. Test concentrations were selected on the basis of previous experience in these or in other laboratories.

F: Ryan et al. 2000. Test concentrations were chosen to provide the highest possible concentration based on either solubility in the selected vehicle or lack of systemic toxicity of the chemical. For those chemicals that were deemed to be non-sensitizing in man, the highest possible dose, up to 100% in some cases, was used.

G: OECD TG 429 (OECD 2002). Doses were selected from the concentration series 100%, 50%, 25%, 10%, 5%, 2.5%, 1%, 0.5% etc. Three consecutive concentrations were selected so that the highest concentration maximizes exposure whilst avoiding systemic toxicity and excessive local skin irritation.

N: No information; reference did not provide specific information for test chemical preparations.
